1.0 Introduction

Windsor Direct 4 ("WD4") Multiterminal is offered for management of multiple trading accounts; helpful for those who manage clients' trading accounts and for clients working with many trading accounts simultaneously.

WD 4 Multiterminal supports all basic functions of WD 4 Client Terminal: working with financial instruments such as Forex, Futures, CFD etc , alerts about system and trading events, provides with fast news, internal electronic mail, Multilanguage interface.

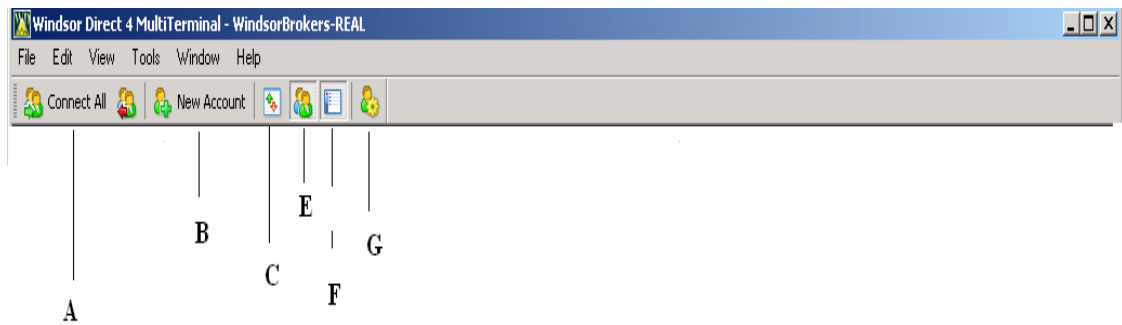

2.0 Installation & Connectivity

Upon accessing the Multiterminal, the real server must be selected. This can be done by clicking on the Tools button > Options > Server>Windsor Brokers – REAL-Windsor Brokers Ltd.

3.0 Adding Trading Accounts

Trading accounts that can be managed by using the terminal that are listed within the "Accounts" window. For managing one or more trading accounts, each trading account must be added to the terminal. Any new trading account can be added using the "File — New Account" menu command (B), the corresponding button in the toolbar, or using the "New Account" command of the "Accounts" window context menu.

When adding a trading account, it is necessary to enter login (trading account number) in the "New Account" window. And the trading account's password. **Repeat this process for each trading account until all trading accounts are added.**

4.0 Main Screen

To start managing trading accounts, it is necessary to connect them all to the server. News, quotes, mail messages start to income in the terminal after connection. ,

4.1 Connection

All trading accounts can be connected to the server by using the "File — Connect All" menu command (J), the corresponding button in the toolbar, or the "Connect All Accounts" command of the "Accounts" window context menu. A separate trading account can be connected to the server using the "Connect Account" command of the "Accounts" window context menu.

Orders: 197

- D. Total Volume:** total volume (total amount of lots) of trades in accounts. The total volume is allocated among accounts according to the preset volume allocation method.
- E. Take Profit:** Take Profit order level
- F. Lots Allocation:** Method of the total volume allocation among accounts:
 - a. **Predefined volume:** The predefined volume will be used at placing orders. It will be necessary to specify manually the lots amount for each order by double-clicking in the "Volume" field, later this predefined volume will apply at placing orders.
 - b. **Total volume for each order:** The total volume will be used at placing of every order.
 - c. **Equal parts:** The total volume will be allocated among all orders in equal parts.
 - d. **On equity ratio:** The total volume will be allocated among orders according to the accounts equity ratio.
 - e. **On free margin ratio:** The total volume will be allocated among orders according to the accounts free margin ratio.
- G. Deviation:** The symbol price can change within the ordering time. As a result, the price of the prepared order will not correspond with the market one, and position will not be opened. The "Deviation" option helps to avoid this. Maximum permissible deviation from the value given in the order can be specified in this field. If prices do not correspond, the program will modify the order by itself, which allows opening a new position.

4.5 Close

Positions can be closed manually in the "Close" tab. All or some of positions can be closed in this tab for all or selected managed accounts. Every connected account that has open positions and every open position are represented as a table line. If there is no need to close positions for an account, the line of this account must be unchecked in the table. If not all positions need to be closed, the necessary positions must be checked in the table.

4.6 Close By

Counter positions can be closed using the "Close By" tab. In this tab, one can close a position by a counter position for all or selected accounts managed. Each connected account, for which there are open counter positions, is represented as a table line. If there is no need to close positions for an account, this account must be unchecked in the table. The position to be closed must be first selected in the account line (in its popup positions list), then check a counter position in the list of opposite positions and press "Close".

If counter positions have different amounts of lots, only one of them remains opened. The volume (the amount of lots) of this position will be the difference between volumes of positions just closed. The direction (short or long) and the open price of this new position will be equal to the greater (in volume) of positions closed.

4.7 Multiple Close By

Multiple close of several counter positions allows closing more than two counter positions for one symbol simultaneously.

Several counter positions will be closed using the "Multiple Close By" tab. Counter positions for all or some of the managed accounts can be closed in this tab. Every connected account that has open counter positions and every open position are represented as table lines. If there is no need to close positions for an account, this account line must be unchecked in the table. To close counter positions for a symbol, it is necessary to press "Multiple Close By".

If the difference between counter positions volume sums is not equal to zero, the operation will result in opening a new position with the volume equal to this difference. The newly opened position will further participate in multiple close, but according to its open time (earlier orders are closed at first). And so on until either all positions are closed or the last resulting position is opened.

Orders: 205 | History: 356 | New: 4 | Close: 32 | Close By: 4 | Multiple Close By: 4 | Pending | Modify | Delete

4.8 Pending

Pending orders can be placed using the "Pending" tab. Pending orders for all or some of the managed accounts can be placed using this tab. Every connected account is represented as a table line. If there is no need to place a pending order for an account, this account must be unchecked in the table.

At placing pending orders, it is necessary to specify their details:

- **Symbol** — the security, for which pending orders are placed.
- **Stop Loss** — Stop Loss order level (optional).
- **Take Profit** — Take Profit order level (optional).

Attention: Zero values of Stop Loss and Take Profit orders mean that the orders are not placed at all.

Symbol: EURUSD, Euro vs US Dollar (1 lot=125000euro)

Stop Loss: 0.0000 Take Profit: 0.0000

Comment:

Total Volume: 5.00 Lots Allocation: total volume for each order

Open Price: 0.0000 Buy Limit Expiry: 6/18/2009 15:38

Place

Account	Status	Volume	Action
<input checked="" type="checkbox"/> 3990, Test Account DO NOT ...	1.3923 / 1.3925	5.00	Place
<input checked="" type="checkbox"/> 3992, test account	1.3923 / 1.3925	5.00	Place
<input checked="" type="checkbox"/> 3993, Supervisor TEST	1.3923 / 1.3925	5.00	Place
<input checked="" type="checkbox"/> 3994, Test Account	1.3923 / 1.3925	5.00	Place

4.9 Modify

Modifying of the current position is setting new stop order levels. For pending orders open price can also be changed. Positions and pending orders are modified in the "Modify" tab. All or some of positions or orders can be modified in this tab for all or some of the managed accounts. Every connected account that has open positions or pending orders and every open position are represented as table lines. If there is no need to modify positions and orders for an account, the corresponding line in the table must be unchecked. If only some of positions or orders should be modified, these positions or orders should be checked in the table.

4.10 Delete

Should the market situation change, there can be the need to delete a pending order. Pending orders can be deleted using the "Delete" tab. Some or all pending orders for some or all managed accounts can be deleted in this tab. Every connected account that has pending orders and every pending order are represented as table lines. If there is no need to delete pending orders for an account, the line of this account in the table must be unchecked. If there is a need to delete only some of pending orders, they must be checked in the table.

If it is necessary, pending orders can be deleted for only one account or one can delete only one pending order by pressing "Delete" in the account line or the order line, respectively.

6.1 News

The list of incoming news is stored in the "News" tab. The news topics are represented as a table and arranged according to the incoming time. The news incoming time, its topic and category are published in the table. This list is updated automatically at incoming of the latest news.

6.2 Alerts

Alerts tab contains information about created alerts. The alerts are intended for signaling about events in the market. Having created alerts, one may leave the monitor as the Multiterminal will automatically inform about the server events.

6.3 Mailbox

The "Mailbox" is intended for working with the internal mailing system. It is in this window of the "Toolbox" where all messages that income to the terminal are stored.

6.4 Journal

All operations and events performed are written to special statistics journals that are represented as text files. The "Journal" section of the "Toolbox" window allows viewing these entries.
